

Tapered Pro implants

predictable, immediate results

Immediate implant treatment requires predictability. Tapered Pro implants have been developed based on over 10 years of tapered implant success. The unique design elements provide a predictable solution for immediate treatment.

design features include:

- tapered body and aggressive threads provide primary stability
- end cutting, self-tapping thread design for controlled implant placement in challenging sites
- unique Laser-Lok microchannels create connective tissue attachment and retain crestal bone, allowing better control of esthetic outcomes
- reduced collar diameter preserves vital bone

Tapered Pro implants & instruments

BioHorizons Tapered Pro implants can be placed with the existing freehand and guided surgery kits. The surgical kits include the instrumentation required for Tapered Pro, Tapered Plus, Tapered Internal and Tapered Tissue Level implants.

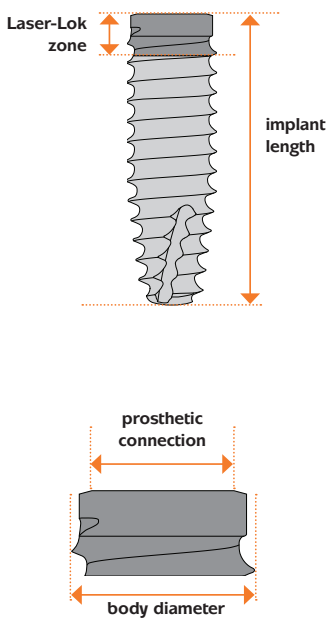

TSK4000 – Tapered HD Surgical Kit

CGS4000 – Guided Surgery Kit*
